

Multilingual_Ticket_Translator — Prompt Document

This document contains the complete development prompt used in Antigravity to generate the AI-powered multilingual customer support platform named Multilingual_Ticket_Translator.

Project Objective

Build a full-stack cloud-deployable multilingual customer support chat platform with authentication, role-based dashboards, real-time messaging UI, automatic translation, and deployment-ready architecture.

Core Functionalities

- Clients communicate in native language
- Engineers communicate in English
- Automatic language detection
- Real-time translation
- Ticket management system
- Role-based dashboards

User Roles

Client:

- Signup/Login
- Create support tickets
- Chat in native language

Engineer/Admin:

- View active tickets
- Reply in English
- Resolve tickets

Translation Workflow

1. Detect client language
2. Translate to English
3. Show translated message to engineer
4. Translate engineer reply back to client language
5. Store both original and translated messages

Frontend Requirements

Build a modern responsive UI similar to WhatsApp Web or Discord using:

- Dark modern theme
- Sidebar ticket list

- Chat containers
- Message bubbles
- Responsive design

Authentication Requirements

- Signup page
- Login page
- JWT authentication
- Role-based authorization

Technology Stack

Frontend: React + TailwindCSS
Backend: FastAPI + Python
Database: SQLite + SQLAlchemy
Translation: deep-translator
Language Detection: langdetect
AI Integration: Ollama + Llama 3

Database Tables

Create tables for:

- users
- tickets
- messages

API Requirements

Implement APIs for:

- signup
- login
- create ticket
- fetch tickets
- send message
- engineer reply
- resolve ticket

Cloud Deployment Requirements

Frontend Deployment: Vercel
Backend Deployment: Render
Version Control: GitHub

Deployment Configuration Files

Include:

- requirements.txt
- package.json
- render.yaml
- vercel.json
- .env.example
- README.md

Expected Final Result

The final product should feel like a real multilingual customer support platform where clients chat in their own language, engineers communicate in English, messages are translated automatically, and the UI looks professional and production-ready.
