

Multilingual_Ticket_Translator — Use Case Document

Team Name

TicketMinds

Project Overview

Multilingual_Ticket_Translator is an AI-powered multilingual customer support platform that enables communication between customers and support engineers speaking different languages.

Actors

1. Client/User
2. Support Engineer/Admin
3. System/AI Translation Engine

Primary Use Cases

- User Registration
- User Login
- Create Support Ticket
- Send Multilingual Messages
- Automatic Language Detection
- Real-Time Translation
- Engineer Response Management
- Ticket Resolution

Use Case — User Registration

Users create accounts with username, password, role, and language preference.

Use Case — User Login

Users log in using valid credentials and access their dashboard.

Use Case — Create Ticket

Clients create support tickets describing issues in their native language.

Use Case — Automatic Translation

The system detects the client language and translates messages into English for engineers.

Use Case — Engineer Reply

Engineers respond in English and replies are translated back into the client's language.

AI Features

- Sentiment Analysis
- Ticket Priority Detection
- AI-powered support assistance

Benefits

- Eliminates language barriers
- Faster support resolution
- Improved customer satisfaction
- Global multilingual communication

Conclusion

Multilingual_Ticket_Translator provides an intelligent multilingual communication platform for modern customer support systems.
