

TicketMinds — Use Case Document

Project Overview

TicketMinds is an AI-powered multilingual customer support platform that enables communication between customers and support engineers speaking different languages.

Actors

1. Client/User
2. Support Engineer/Admin
3. System/AI Translation Engine

Primary Use Cases

- User Registration
- User Login
- Create Support Ticket
- Send Multilingual Messages
- Automatic Language Detection
- Real-Time Translation
- Engineer Response Management
- Ticket Resolution

Use Case 1 — User Registration

Actor: Client/Engineer

Description: Users create accounts with username, password, role, and language preference.

Use Case 2 — User Login

Actor: Client/Engineer

Description: Users log in using valid credentials and access their dashboard.

Use Case 3 — Create Ticket

Actor: Client

Description: Client creates support ticket describing issue in native language.

Use Case 4 — Send Message

Actor: Client
Description: Client sends multilingual message which gets translated automatically.

Use Case 5 — Engineer Response

Actor: Engineer/Admin
Description: Engineer responds in English and reply is translated back to client language.

Use Case 6 — Ticket Resolution

Actor: Engineer/Admin
Description: Engineer resolves support ticket after issue completion.

AI Features

- Sentiment Analysis
- Ticket Priority Detection
- AI-based support assistance

Benefits

- Eliminates language barriers
- Improves customer satisfaction
- Faster support resolution
- AI-powered workflow

Conclusion

TicketMinds provides an intelligent multilingual communication platform for modern customer support systems.

Use Case Summary Table

Use Case	Actor	Outcome
User Registration	Client/Engineer	Account Created
User Login	Client/Engineer	Dashboard Access
Create Ticket	Client	Ticket Generated
Send Message	Client	Message Translated
Engineer Reply	Engineer	Reply Delivered
Resolve Ticket	Engineer	Ticket Closed
